CAREER OBJECTIVE

Final-year Computer Engineering student with practical knowledge of Java Full Stack Development, including Java, JDBC, Servlets, HTML, CSS, JavaScript, and MySQL. I understand how frontend and backend work together and have basic knowledge of REST APIs and databases. I am looking for an entry-level Software Developer job where I can use my programming skills, improve my knowledge, and grow with the company.

EDUCATION

Bachelor Of Technology (BTech) From
Nanasaheb Mahadik College Of Engineering,
Sangli, 2022-2026 (Pursuing)

TECHNICAL SKILLS

- Programming: Core Java (OOPs, Exception Handling, Collections, Strings)
- Languages: Java, Dart, JavaScript, HTML, CSS, XML.
- API Testing: Postman.
- Backend: JDBC, Servlets, REST APIs, Node.js.
- Mobile Development: Android Development.
- Architecture: MVVM Pattern.
- Libraries: Retrofit , GSON, ZXing, Room Database
- Database: Room Persistence Library, SQL (DDL, DML, Joins), MongoDB
- Tools: Android Studio, VS Code, Git, GitHub

ACHIEVEMENTS

- 1st Prize – Hackathon (Phishing URL Detection System).
- 3rd Prize – Problem Solving Competition (Aveskar Competition).

LANGUAGE

- English
- Hindi
- Marathi

PROJECT

1.NutriScan – Personalized Health & Ingredient Analyzer(Application)

Technologies: Java, XML, Flutter, Retrofit, Room, ZXing, OpenFoodFacts API.

- Developed a barcode-based mobile application that analyzes food products, converts complex ingredients into user-friendly terms (English, Hindi, Marathi), and provides personalized health evaluation based on age, allergies, diabetes, and hypertension.
- Designed and implemented a Traffic Light (Red/Orange/Green) health rating system along with an automated diet plan recommendation engine based on user profile and scan history.
- Optimized application performance by integrating OpenFoodFacts API with Room Database for local caching, reducing repeated API calls by 40%.

Role: Team Leader:

- Designed application architecture (MVVM).
- Developed core modules including API integration, health engine, barcode scanning, and Room database.
- Ensured performance optimization and multilingual support implementation.

2. Medicine Supply Management System with AI Chatbot

Technologies: HTML, CSS, JavaScript, Node.js, MongoDB

- Developed a web-based system to manage medicine availability.
- Integrated an AI chatbot for user assistance and product search.

Role: Team Leader

- Managed project planning, task allocation, and architecture design.
- Developed core modules including API integration, database management, and backend logic.
- Implemented real-time systems, chatbot integration, and performance optimization.
